EDUCATION

University of Waterloo

Bachelor of Computer Engineering

September 2026

EXPERIENCE

Robotics Student

October 2021 — Present

Seaquam Robotics

Delta, BC

- Created the most **consistent autonomous routines out of 50+ teams** allowing us to win during the autonomous period every match.
- Programmed various algorithms for **autonomous robot motions** which made use Trigonometry (determining angles to points, polar coordinates, etc), Calculus (calculating the velocity and acceleration on a Cubic Bézier path for generating trajectories), and physics (to compensate for centripetal force while following trajectories)
- Qualified for the **Vex Robotics World Championships** three times.

Sensei

September 2025 — March 2026

Code Ninjas

Surrey, BC

- Helped students working on the most advanced levels with debugging code in **C# with Unity**, and adding features for their games.
- Aided with sales calls, SEO, and optimizing ads for the branch.

Lead Web Developer

October 2023 — Present

Seaquam Robotics

Delta, BC

- Led a team of 4 other students to make the data on a website dynamic by creating a **server with Deno** for managing data, connecting to APIs, and updating the UI on the frontend.
- Created a **Content Management System** in React with TypeScript which resulted in our coach being able to easily update the data for different teams every year.

PROJECTS

Verbosity (Custom Programming Language)

<https://github.com/Github11200/Verbosity>

- A compiler written in C++ for my own programming language.
- It contains a **lexer, parser, and code generator** to take input code, create an abstract syntax tree, and then generate an output in C++.

Termicord

<https://github.com/Github11200/Termicord>

- Discord in the terminal using **C++** and **raw TCP sockets** to communicate and send messages.
- Creates several servers to act as chat rooms, spins up a custom **HTTP server**, and includes client code for a TUI application so the user can chat with others from their terminal.

Posturai

<https://github.com/Github11200/Posturai>

- A Posture correction app written in **Python** and Streamlit whose goal is to detect bad posture and warn a user about it.
- Makes use of a **Machine Learning model** written using **PyTorch** to classify good and bad posture based on several images.

AWARDS

Excellence Award @ Vex Robotics World Championship, RECF & Vex Robotics

April 2026

- Awarded to **1 out of 20,000+** teams across the world consistent and excellent performance in all areas of robotics.

Excellence Award @ Provincial Championship, Vex Robotics

February 2026

- Awarded to 1 out of the 100+ teams in British Columbia for excellent performance at the competition.

VSHacks Hackathon 2nd Place, VSHacks

July 2025

Tournament Finalists x2 (Robotics), Vex Robotics

March 2024, March 2025
